

Energy Efficiency and Alternative Fuel Vehicles

As we know, energy efficiency is the fruit already on the ground a fast, low-risk, economical way to address climate change and energy security concerns, build domestic jobs that cannot be exported, and help businesses and homeowners save money. We also know we need to aggressively pursue advanced clean energy technologies and advanced manufacturing to meet these objectives and enhance U.S. global competitiveness. Ensuring the Federal Government leads in clean energy is important to this effort. Due to its sheer size, the Federal Government offers taxpayers significant savings in energy bills through greater efficiency, as well as a test bed for advanced technologies.
